EdgeVision

AI that turns the cameras you already have into a real-time decision engine — for your stores and restaurants.

— THE PROBLEM

Your cameras record everything. And tell you **nothing**.

Hours of footage, every day. Almost none of it becomes a decision — until it's already too late.

— THE IDEA

What if every camera
could **think**?

— HOW IT WORKS

Simple to switch on.

01

Connect

Use the cameras you already have.

02

Watch

It watches every feed, all day.

03

Understand

It reads the whole scene — not just motion.

04

Act

Your team gets a clear alert in seconds.

— No new cameras · No cloud · Runs on one small Intel box inside your store

— FOR YOUR STORES

See every moment
that **makes a sale.**

— IN-STORE · SAMPLE USE CASES

A few things it sees on the floor.

Footfall & dwell

See where shoppers go and linger, so layout follows real behaviour — not guesswork.

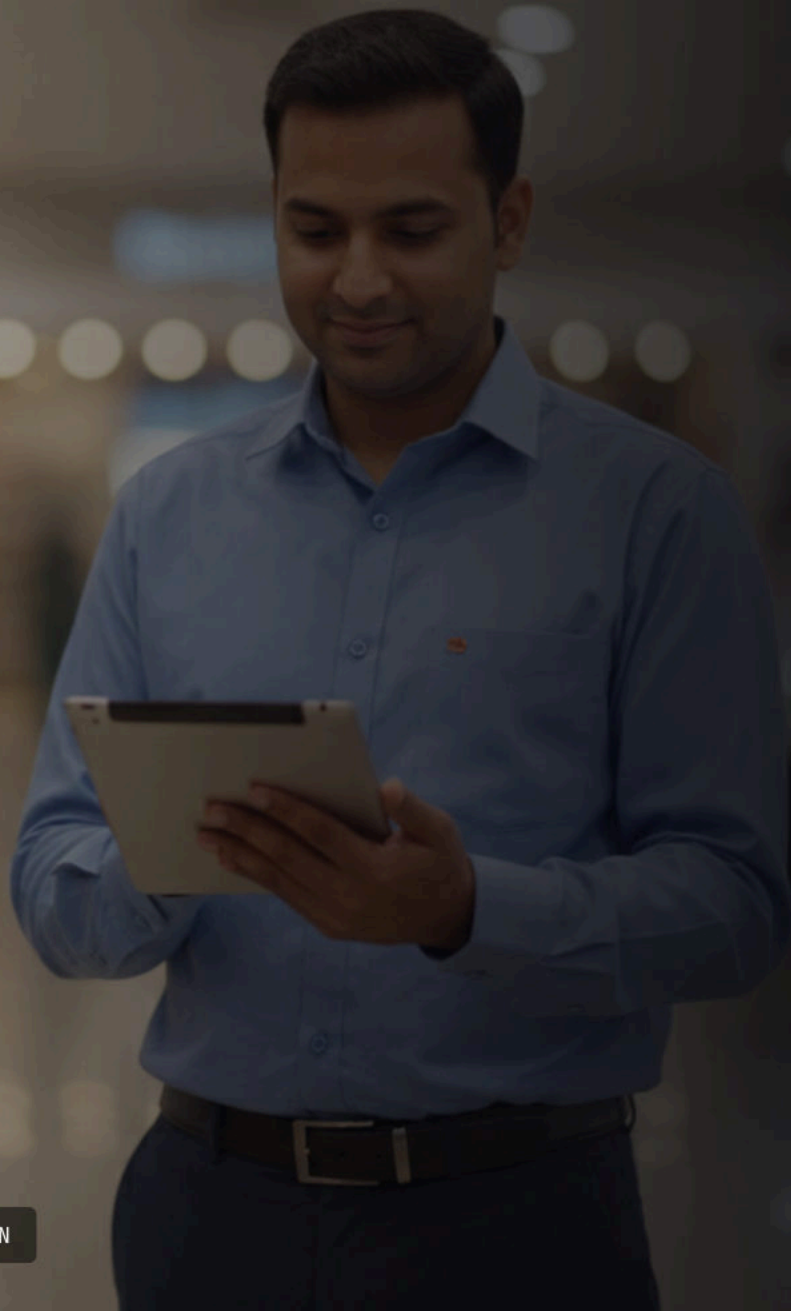

Queue at billing

An alert the instant a queue builds, so you open a till before a walk-out.

Staff on the floor

Know every section is covered and customers are helped fast, even at peak.

— A MOMENT THAT MATTERS

A regular walks in —
your team **knows in
seconds.**

- The manager's phone lights up at the door
- Name, tier and what to offer — for a warm welcome
- Worked out inside the store · no faces stored

— FOR YOUR RESTAURANTS

Speed, accuracy, safety —
every shift.

— IN THE RESTAURANT · SAMPLE USE CASES

A few things it sees on the line.

Order accuracy

Check items against the order and flag a wrong or missing one before it's bagged.

Speed at the counter

Spot queues and slow stations live, and move staff before guests give up.

Hygiene & PPE

Gloves, handwash and hold-times — checked continuously, ready for the next audit.

— THE WOW MOMENT

It catches the missing item — **before** the bag leaves.

- Reads the order against what's on the tray
- Flags a miss the instant it happens
- A wrong order fixed before the customer ever sees it

 WHY IT'S DIFFERENT

Old cameras count. EdgeVision understands.

OLD CAMERAS — COUNT

- "A person entered the store."
- "Motion in aisle 4."
- "Someone is at the counter."

EDGEVISION — UNDERSTANDS

- "A regular came in — greet them, they love the front table."
- "Spill in aisle 4 — clean-up sent."
- "This order is missing a sauce — fix it before it's bagged."

— PRIVATE BY DESIGN

Everything stays in your store. On one small **Intel** box.

No faces stored · nothing sent to the cloud · works even if the internet drops.

— LET'S START

See it live in your store in **three weeks**.

Pick one location. We install on your cameras. By week three you're watching real results — with zero risk. info@pattern-ai.com · edgevision.pro · +91 99618 71254
