

— RETAIL INTELLIGENCE · PREPARED FOR ZACH & KIKI

EdgeVision

for Zach & Kiki

Every camera in your stores — a real-time teammate for a safe, delightful family experience.

A proposal to turn the cameras Zach & Kiki already has into live retail intelligence — child safety, family experience and store operations — running on-site, private by design.

● CHILD-SAFE ● PRIVACY BY DESIGN ● INTEL EDGE

— PREPARED FOR ZACH & KIKI

Children's retail is a different kind of floor.

A store for kids isn't just about selling — it's about families feeling safe, seen and delighted. The moments that build (or break) loyalty happen on the floor, in real time.

Families, not shoppers

Parents and children browse longer and move differently than a solo adult — in groups, with prams, at two eye-levels.

Safety comes first

A child out of sight for even a moment is every parent's fear — and your biggest duty of care.

Experience drives loyalty

Safe, well-staffed, delightful stores turn first-time parents into repeat families.

— THE OPPORTUNITY

What your cameras see but can't tell you.

You can't watch every corner

Play zones, fitting areas, aisles and exits — all at once is impossible for one team.

You learn too late

A wandering child, a spill, an unstaffed till — noticed after it matters, not the moment it happens.

You decide on gut feel

Which displays pull kids, when families surge, how to staff the weekend — guessed, not measured.

— EDGEVISION · KEY FEATURES

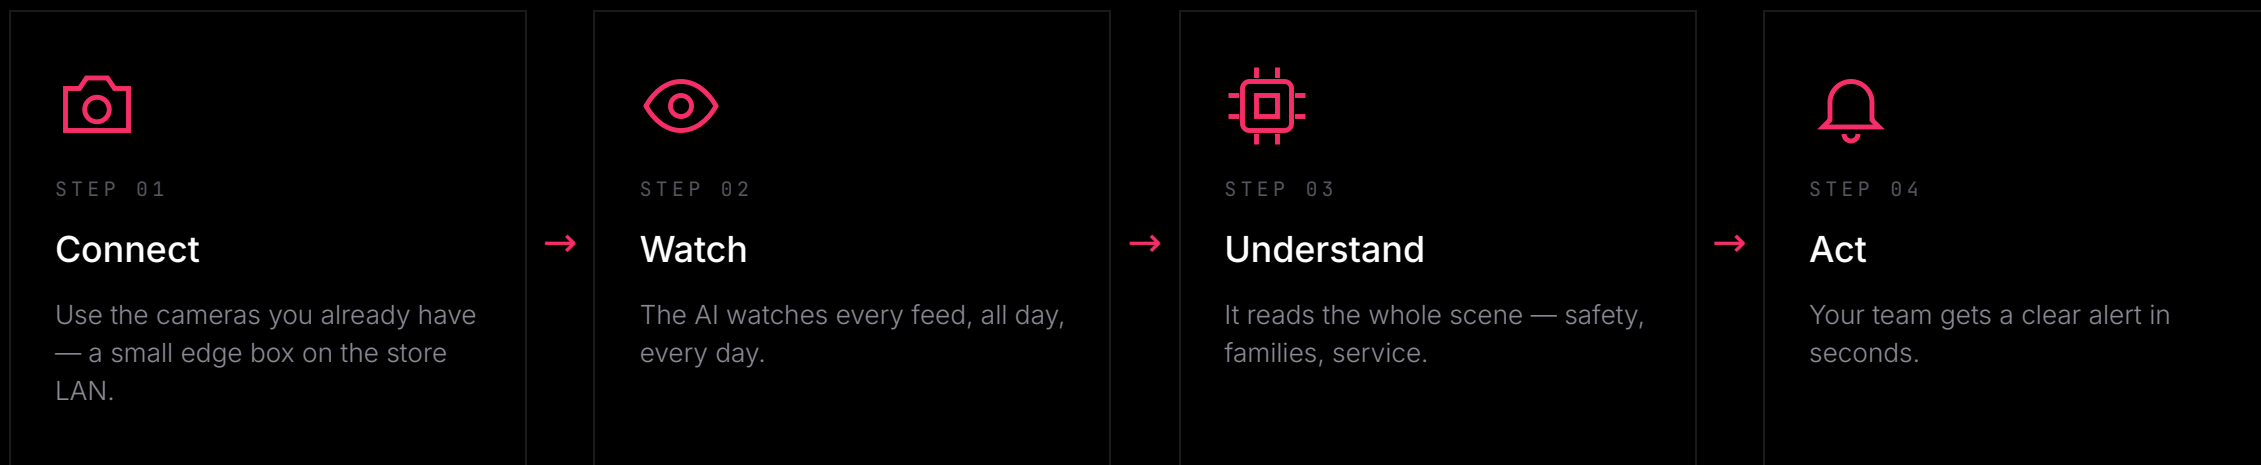

One platform. On your cameras.

01 Edge-first Runs on a small Intel appliance inside the store. No cloud dependency — it keeps working if the internet drops.	02 GenAI + VLMs Reads the whole scene like a person would — safety, behaviour, quality — not just motion or a tripwire.	03 Private by design No faces stored, no video leaves the store. Built to be safe for a children's environment.	04 Acts in seconds A clear, simple alert to the right person's phone — the instant something needs attention.
---	---	---	---

— Uses your existing cameras · a small on-site edge box (a few added only where coverage needs it)

— HOW IT WORKS

Simple to switch on.

— No new cameras to rip out • No cloud • Runs on a small Intel appliance inside your store

FOR ZACH & KIKI

Use cases for your stores.

Grouped for a children's brand — family experience, child safety, and store operations.

USE CASES · FAMILY EXPERIENCE

Delight the family, win the basket.

01 Family footfall & dwell

See how many families come in, where they linger, and when the store surges.

02 Kid-height display pull

Measure which displays and characters actually draw children in — at their eye level, not just adults'.

03 Play-zone engagement

How long kids stay and play, and how that turns into baskets for parents.

04 Fitting & trial demand

Trial-room demand for kidswear, so you staff and stock to real behaviour.

05 Queue & billing wait

An alert the moment the till queue builds — so families aren't kept waiting with restless kids.

06 Repeat-family welcome

Recognise loyal parents at the door for a warm welcome — no faces stored.

USE CASES · CHILD SAFETY & CARE

Peace of mind, watched continuously.

01 Unattended-child alert

Flag a child who has been on their own too long, so a team member can step in early.

02 Exit & door watch

A little one heading for the entrance unaccompanied triggers an instant nudge to staff.

03 Play-zone capacity

Know when a play area is over-full, so supervision stays safe.

04 Floor-hazard detection

Spills, dropped small parts (a choking risk) and scattered stock — caught the moment they appear.

05 Restricted-area entry

A child entering the stockroom or back-of-house is flagged immediately.

06 Slips & blocked aisles

Obstructions and hazards surfaced before anyone trips.

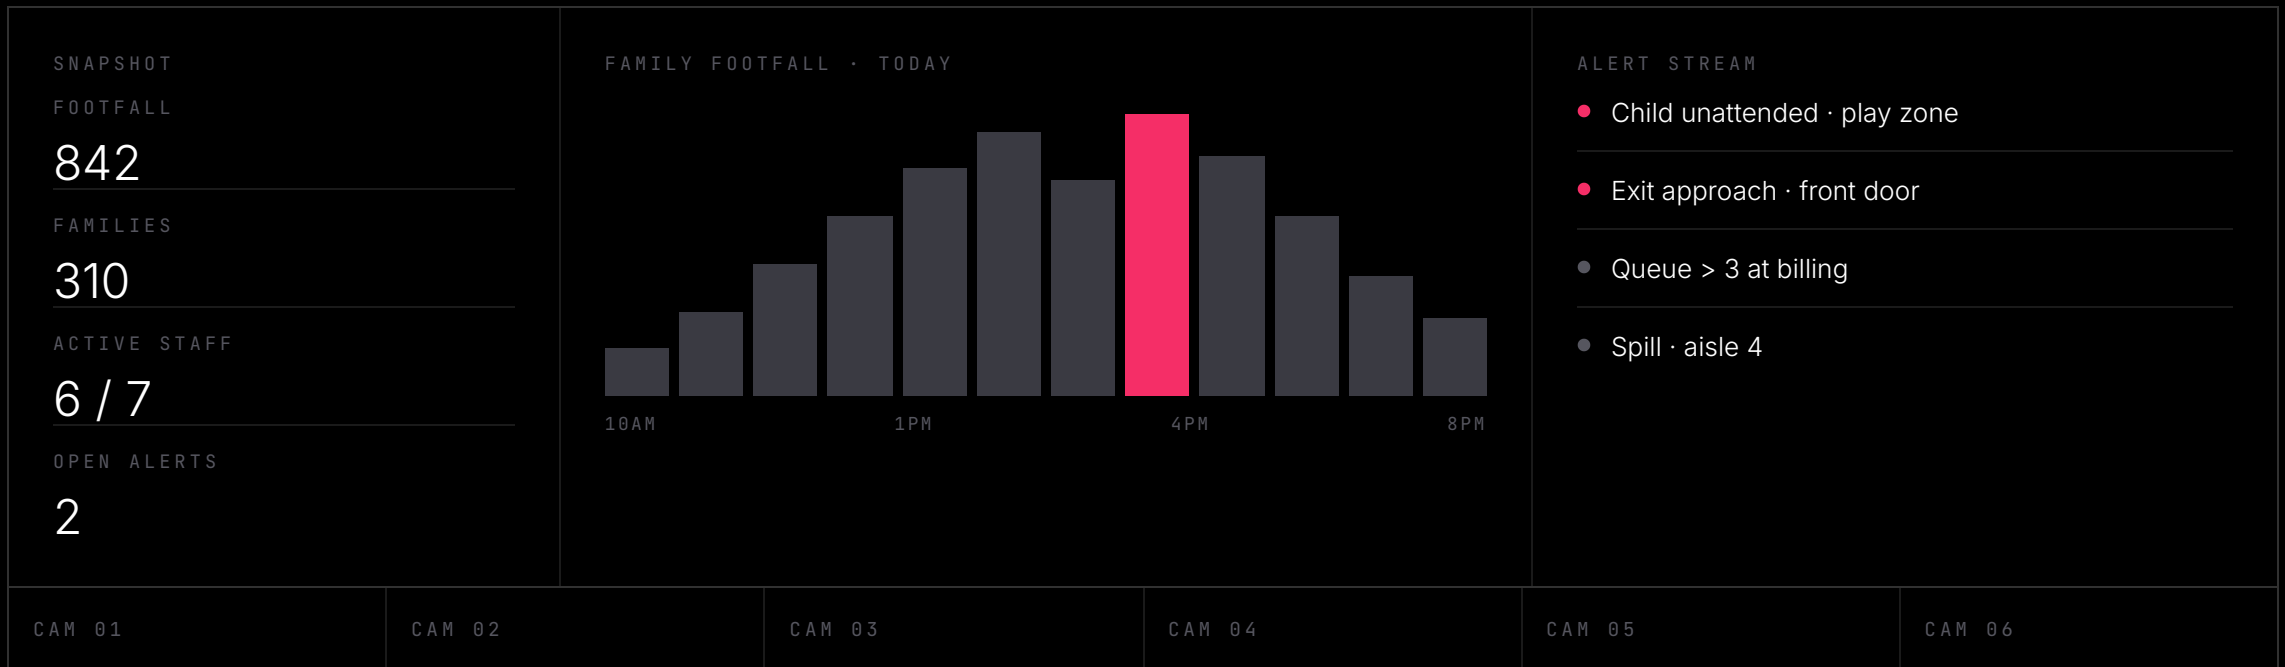

— USE CASES · STORE OPERATIONS

Run a tighter, calmer floor.

01 Zone coverage at peak Know whether every section is staffed when families arrive — and get alerted when it isn't.	02 Service attentiveness Measure how quickly a browsing family is acknowledged and helped.
03 Shrink & concealment cues Flag tag-tampering and concealment as they happen — not at stock-take.	04 Planogram & housekeeping Verify displays, tidiness and open/close standards automatically.
05 Opening & closing audit Confirm daily procedures were completed, camera-verified.	06 Camera health & obstruction Know at once if a camera is down, moved or blocked.

ONE PANE OF GLASS

One screen your store team actually uses.

— PRIVATE BY DESIGN

Especially important with children.

No faces stored

No biometrics and no video are sent anywhere. Recognition (loyalty opt-ins only) is matched on-box and discarded.

Everything stays on-site

Runs fully on-prem — aligned with India's DPDP data-protection expectations for minors.

Intel-powered edge

A small, efficient Intel appliance per store — nothing else to buy or send away.

— STATEMENT OF WORK

What a pilot includes.

IN SCOPE · WE DELIVER

- ✓ Edge appliance install & camera on-boarding (RTSP)
- ✓ Configure selected use cases — safety, experience & ops
- ✓ Live operations dashboard + mobile / WhatsApp alerts
- ✓ Manager training & alert rehearsal
- ✓ Weekly insights report per store
- ✓ Support through the pilot

YOU PROVIDE

- Access to existing IP cameras & adequate coverage
- Store LAN / network access for the edge box
- A single point of contact per store
- Site access for a half-day install
- Sign-off on which use cases go live first

Start with one store. We prove the safety and experience use cases on your own floor before any wider rollout — with zero risk to the rest of your estate.

ENGAGEMENT MODEL

From cameras to insights in three weeks.

WEEK 01

Audit & Install

Site survey, camera audit, edge box on the store LAN.
Baseline data collection starts.

WEEK 02

Calibrate & Tune

Zone & play-area definitions, safety thresholds, alert
routing wired to your team's phones.

WEEK 03

Handover & Train

Manager training, dashboard onboarding, alert rehearsal,
first weekly insights report.

By end of week 3: a running EdgeVision install, live safety & experience alerts, and a store team that has run a full daily cycle on the console.

COMMERCIALS

Simple pricing. Risk-free to start.

STAGE 01

Proof of Concept

We invest in the hardware and waive the fees — you try it risk-free.

Per-camera usage fee	Waived
----------------------	--------

Hardware cost	We invest
---------------	-----------

Refundable security deposit	₹20,000
-----------------------------	---------

Fully refunded once the POC is approved and you decide to proceed.

STAGE 02

Post-POC · Rollout

Go live across stores on a simple, predictable model.

One-time hardware by compute for the use cases deployed	₹1–1.5 lakh
--	-------------

Ongoing software	₹500 / camera / month
------------------	-----------------------

Flexible — further negotiable on the number of stores and overall volume.

Edge-compute architecture · private by design

All CCTV data stays on-premise on the edge server inside your store — **nothing is sent to the cloud** unless a specific use case requires it. Full compliance with the latest privacy regulations and data-handling standards.

Let's make every Zach & Kiki store **safe & delightful**.

Pick one store. We install on the cameras you already have. By week three you're watching real safety and experience results on your own floor — with no risk to the rest of your estate.
