
RETAIL INTELLIGENCE · PREPARED FOR ZACH & KIKI

EdgeVision

for Zach & Kiki

Every camera in your store & fulfilment — a real-time teammate for a safe, delightful family experience.

A proposal to turn the cameras Zach & Kiki already has into live retail intelligence — across your store floor and packing space — family experience, child safety and order accuracy, running on-site, private by design.

● CHILD-SAFE ● PRIVACY BY DESIGN ● INTEL EDGE

PREPARED FOR ZACH & KIKI

A kids' fashion brand, online and in-store.

Zach & Kiki is loved online and in the store — with festive and occasion peaks (Onam, heirloom, best-sellers). Whether a parent is on your shop floor or an order is on the packing table, the moments that build loyalty happen in real time.

Online-first, store-loved

Families discover you online and come in to touch the fabric — both journeys deserve to be understood, not guessed.

Festive & occasion peaks

Onam, occasion and heirloom drops bring surges — of footfall in-store and orders to pack — that are hard to staff by gut feel.

Little customers, big duty of care

Small children on the shop floor mean safety and attentiveness matter as much as the sale.

— THE OPPORTUNITY

What your cameras see but can't tell you.

You can't watch every corner

Fitting areas, aisles, the storeroom, the packing bench and the entrance — all at once is impossible for one team.

You learn too late

A wandering child, a spill, a best-seller stocked out, a wrong-size dispatch — noticed after it matters, not now.

You decide on gut feel

Which displays convert, when the festive rush hits, how to staff store and packing — guessed, not measured.

— EDGEVISION · KEY FEATURES

One platform. On your cameras.

01 Edge-first Runs on a small Intel appliance inside the store. No cloud dependency — it keeps working if the internet drops.	02 GenAI + VLMs Reads the whole scene like a person would — safety, behaviour, quality — not just motion or a tripwire.	03 Private by design No faces stored, no video leaves the store. Built to be safe for a children's environment.	04 Acts in seconds A clear, simple alert to the right person's phone — the instant something needs attention.
---	---	---	---

— Uses your existing cameras · a small on-site edge box (a few added only where coverage needs it)

— HOW IT WORKS

Simple to switch on.

— No new cameras to rip out • No cloud • Runs on a small Intel appliance inside your store

FOR ZACH & KIKI

Use cases for store & fulfilment.

Grouped for a kids' fashion brand — family experience, child safety, and D2C fulfilment & operations.

USE CASES · FAMILY EXPERIENCE

Delight the family, win the basket.

01 Footfall & dwell by section

See how many families come in and where they linger — infants, boys, girls, occasion wear.

02 Festive & occasion display pull

Measure which displays — Onam, occasion, best-sellers — actually draw families in and convert.

03 Fit, size & trial demand

See trial-area demand and which sizes families ask for, so you stock and staff to real behaviour.

04 Browse-to-buy by category

Track how browsers become buyers across sections and price points, and act the same day.

05 Queue & billing wait

An alert the moment the till queue builds — so families aren't kept waiting, especially at COD and festive rush.

06 Repeat-family welcome

Recognise loyal parents at the door for a warm welcome — no faces stored.

STORE FLOOR · THE FAMILY JOURNEY

USE CASES · CHILD SAFETY & CARE

Peace of mind, watched continuously.

01 Unattended-child alert

Flag a child who's been on their own too long, so a team member can gently step in.

02 Exit & door watch

A little one drifting toward the open entrance triggers an instant nudge to staff.

03 Floor-hazard detection

Spills, dropped pins or small parts (a choking risk) and scattered stock — caught the moment they appear.

04 Restricted-area entry

A child slipping into the stockroom or back-of-house is flagged immediately.

05 Slips & blocked aisles

Obstructions and hazards surfaced before anyone trips.

06 After-hours security

Motion in the closed store or restricted zones flagged out of hours.

USE CASES · FULFILMENT & OPERATIONS

Right size, right box, out the door.

01 Pack accuracy — style & size

Check the packed order against the ticket before the box is sealed — right print, right size — so wrong-size returns drop.

02 Dispatch & hand-off visibility

See packing, staging and courier hand-off as they happen, and clear a backlog before it slows the day.

03 Festive stock & fast-movers

Watch shelves for best-sellers and festive drops (Onam, occasion) running low — restock before you sell out.

04 Staff vs order volume

Compare packing staff to real order flow by hour, so festive surges are covered.

05 Shrink & process gaps

Flag mishandling and process gaps as they happen — not at month-end stock-take.

06 Camera & area health

Know at once if a camera is down, moved or blocked.

PACKING & DISPATCH · D2C

ONE PANE OF GLASS

One screen your store team actually uses.

— PRIVATE BY DESIGN

Especially important with children.

No faces stored

No biometrics and no video are sent anywhere. Recognition (loyalty opt-ins only) is matched on-box and discarded.

Everything stays on-site

Runs fully on-prem — aligned with India's DPDP data-protection expectations for minors.

Intel-powered edge

A small, efficient Intel appliance per store — nothing else to buy or send away.

STATEMENT OF WORK

What a pilot includes.

IN SCOPE · WE DELIVER

- ✓ Edge appliance install & camera on-boarding (RTSP)
- ✓ Configure selected use cases — family experience, child safety & fulfilment
- ✓ Live operations dashboard + mobile / WhatsApp alerts
- ✓ Manager & packing-team training + alert rehearsal
- ✓ Weekly insights report (store &/or fulfilment)
- ✓ Support through the pilot

YOU PROVIDE

- Access to existing IP cameras (store &/or packing area)
- Store / site LAN access for the edge box
- A single point of contact
- Site access for a half-day install
- Sign-off on which use cases go live first

Start with one store. We prove the safety and experience use cases on your own floor before any wider rollout — with zero risk to the rest of your estate.

ENGAGEMENT MODEL

From cameras to insights in three weeks.

WEEK 01

Audit & Install

Site survey, camera audit, edge box on the store LAN.
Baseline data collection starts.

WEEK 02

Calibrate & Tune

Zone & play-area definitions, safety thresholds, alert
routing wired to your team's phones.

WEEK 03

Handover & Train

Manager training, dashboard onboarding, alert rehearsal,
first weekly insights report.

By end of week 3: a running EdgeVision install, live safety & experience alerts, and a store team that has run a full daily cycle on the console.

COMMERCIALS

Simple pricing. Risk-free to start.

STAGE 01

Proof of Concept

We invest in the hardware and waive the fees — you try it risk-free.

Per-camera usage fee	Waived
----------------------	--------

Hardware cost	We invest
---------------	-----------

Refundable security deposit	₹20,000
-----------------------------	---------

Fully refunded once the POC is approved and you decide to proceed.

STAGE 02

Post-POC · Rollout

Go live across stores on a simple, predictable model.

One-time hardware by compute for the use cases deployed	₹1–1.5 lakh
--	-------------

Ongoing software	₹500 / camera / month
------------------	-----------------------

Flexible — further negotiable on the number of stores and overall volume.

Edge-compute architecture · private by design

All CCTV data stays on-premise on the edge server inside your store — **nothing is sent to the cloud** unless a specific use case requires it. Full compliance with the latest privacy regulations and data-handling standards.

Let's make every Zach & Kiki store **safe & delightful.**

Pick one store. We install on the cameras you already have. By week three you're watching real safety and experience results on your own floor — with no risk to the rest of your estate.
