

EdgeVision — Retail & QSR

PRESENTER CUE SHEET • INTEL EVENT

30-minute session

~20:35 present • rest for Q&A
Pattern AI Labs

#	AT	LEN	SLIDE • KEY MESSAGE	DELIVERY CUE
01	0:00	+0:30	Cover Turn the cameras you already have into a decision engine.	Warm open. Frame: ~20 min, then discussion.
02	0:30	+0:45	The problem — hook You record everything, and learn nothing — until it's too late.	Show of hands: "reviewed footage only after a complaint?"
03	1:15	+1:00	Three blind spots Can't watch every camera • find out too late • decide on gut feel.	Tie each to their world; these are what we remove.
04	2:15	+0:30	The idea What if every camera could think? Meet EdgeVision.	One sentence: an AI teammate, not more screens.
05	2:45	+1:15	How it works Connect → Watch → Understand → Act.	Reassure: no new cameras, no cloud, one small Intel box.
06	4:00	+1:00	Four outcomes More sales • better service • less loss • safer & cleaner.	Pick the one that matters most to this room; expand it.
07	5:00	+0:15	Retail — divider First, your stores.	Quick transition.
08	5:15	+1:00	What it sees Same cameras, two answers: customer + team.	Speaks to GMs and ops leaders.
09	6:15	+0:50	Retail use cases — customers Footfall, conversion, VIP, queues.	One line each; pause on the 2–3 that fit the room.
10	7:05	+0:50	Retail use cases — operations Staffing, shrink, safety, compliance.	Ask which of these costs them most today.
11	7:55	+1:15	One screen One screen your managers actually use.	Make it feel like their morning huddle.
12	9:10	+1:00	The VIP moment A VIP walks in; your team knows in seconds.	Tell it as a story. Stress: no faces stored.
13	10:10	+0:15	QSR — divider Now your restaurants.	Quick transition.
14	10:25	+1:00	The three numbers Speed, accuracy, safety — live.	Tie to P&L and health / FSSAI audits.
15	11:25	+0:50	QSR use cases — speed & accuracy Drive-thru, queues, accuracy, remakes.	Tie straight to revenue and the drive-thru.
16	12:15	+0:50	QSR use cases — safety & ops PPE, handwash, hold-times, labour.	The audit & compliance story; great for multi-unit.
17	13:05	+1:00	Drive-thru Every lane, every car, every second.	Biggest revenue line, hardest to measure — on existing cameras.
18	14:05	+1:30	The engine — GenAI + VLMS A Vision-Language Model reads the scene like a person.	THE why. Keep it plain — one or two sentences, no deep tech.
19	15:35	+1:00	Why it's different Old cameras count. GenAI understands.	Read one before/after example aloud — it lands.
20	16:35	+1:15	Where it shows up in your P&L Sales • shrink • throughput • loyalty.	Do the quick math with them; invite their own numbers.
21	17:50	+1:00	Private by design + Intel Nothing leaves the store; runs on Intel.	Handle privacy + IT head-on. Lean into the Intel partnership.
22	18:50	+0:45	Proof Intel partner • production CV at scale • retail+QSR focus.	Credibility; names they'll recognise.
23	19:35	+1:00	Close — the ask One location, 3-week pilot, zero risk.	"Which location should we start with?"

Clock = when to be ON that slide • aim to finish presenting by **20:35**
