
EDGEVISION • FOR STORES & RESTAURANTS

EdgeVision

Retail & QSR

Turn the cameras you already have into a decision engine.

Real-time AI that watches every store and restaurant camera — and tells your team exactly what to do, the moment it matters. On-site. Private. Intel-powered.

● EDGE-FIRST ● PRIVACY BY DESIGN ● INTEL POWERED

THE PROBLEM

Your cameras record everything. And tell you nothing.

Hundreds of feeds. Thousands of hours. Almost none of it turns into a decision — until it's already too late.

— THE PROBLEM

Three blind spots that cost you every day.

You can't watch every camera

One person can watch a handful of screens. The rest of the store runs unseen.

You find out too late

The problem shows up at the till, in a complaint, or in next month's audit — not now.

You decide on gut feel

Staffing, layout, service, speed — big calls made without the numbers to back them.

THE IDEA

What if every camera could think?

EdgeVision is an AI teammate that watches every camera in real time — and tells your team what's happening and what to do, **right now**.

— HOW IT WORKS

Simple to switch on.

— No new cameras • No cloud • Runs on a small Intel appliance inside your store

— WHAT YOU GET

Four outcomes you can feel.

More sales

Convert more of the footfall you already pay for.

Better service

The right staff, in the right place, at the right moment.

Less loss

Catch shrink and mistakes as they happen, not weeks later.

Safer & cleaner

Hygiene and safety, checked continuously — audit-ready.

FOR YOUR STORES

In your stores.

See every moment that decides a sale — as it happens.

— **IN-STORE**

It watches two things at once.

CUSTOMERS

Who walks in, where they linger, who's a VIP.

- Spot loyalty & high-value guests at the door
- See which displays actually pull people in
- Know the busy moments before queues build

STAFF

Who's on the floor — and who's actually helping.

- ✓ Is every zone covered at peak?
- ✓ Which staff turn browsers into buyers
- ✓ Fewer huddles, more helping

Same cameras. Two answers. What is the customer experiencing — and how is the team performing?

— **RETAIL · USE CASES**

What it sees for your customers.

01 Footfall & dwell heat-maps See where shoppers actually go and linger, so layout and merchandising follow real behaviour.	02 Window & display pull-rate Measure how many passers-by each window or display draws inside — and prove what merchandising works.
03 Browse-to-buy conversion Track how many browsers become buyers, by zone and hour, and act on drop-off the same day.	04 VIP & loyalty recognition Spot a high-value guest the moment they enter and cue the right associate — with no faces ever stored.
05 Queue & checkout wait Get an alert the instant a queue builds, so you open a till before a customer walks out.	06 Category cross-shopping See how customers flow between departments, and place ranges where journeys naturally lead.

— **RETAIL · USE CASES**

What it sees for your operation.

01 Zone coverage at peak Know whether every section is staffed when it's busy, and get alerted when a key area goes unattended.	02 Service attentiveness Understand how quickly customers are acknowledged and helped, turning service standards into something you can measure.
03 Conversion by associate Link who was helping to what sold, so coaching is based on real outcomes rather than opinion.	04 Shrink & concealment cues Flag tag-tampering, concealment and other loss signals as they happen — not at stock-take.
05 Slips, spills & blocked exits Catch safety hazards the moment they appear and send the fix before anyone is at risk.	06 Display & compliance checks Verify planogram, housekeeping and open/close standards automatically, store by store.

— ONE PANE OF GLASS

One screen your managers actually use.

— A MOMENT THAT MATTERS

A VIP walks in. Your team knows in seconds.

- The moment they enter, the manager's phone lights up
- Name, tier, last visit and favourites — ready for a warm welcome
- The right associate and the right offer, before they reach the rail

— No faces are stored · it all happens inside your store

LOYALTY · TIER-GOLD ARRIVAL

FOR YOUR RESTAURANTS

In your restaurants.

Speed, accuracy and safety — on every shift, on every lane.

— **QUICK-SERVICE**

The three numbers every shift lives by.

Speed

Drive-thru wait, counter queues and time-to-first-bag — measured live, every daypart.

Accuracy

Right items, right modifiers — caught before the bag ever leaves the counter.

Safety

Gloves, handwash and hold-times — checked continuously, ready for the next audit.

— QSR · USE CASES

Speed and accuracy, in detail.

01 Drive-thru time per lane Measure wait and service time for every car in every lane, live — the number behind your busiest revenue line.	02 Counter & kiosk queues See queues build at the counter or kiosk and move staff before guests give up and leave.
03 Time-to-first-bag Track how long from order to hand-off, so you catch a slow shift while it's still happening.	04 Kitchen bottlenecks Spot the station backing up the line and rebalance before tickets pile up.
05 Order accuracy Check items and modifiers against the order and flag a mistake before the bag ever leaves the counter.	06 Packaging & remakes Catch packaging errors and rising remake rates that quietly eat margin and slow the line.

QSR · USE CASES

Safety, cleanliness and ops.

01 PPE compliance Confirm gloves, hairnets and aprons are worn where they should be — continuously, and audit-ready.	02 Handwash cadence Track handwash frequency against your SOP, so hygiene becomes a habit you can prove.
03 Hold-time & temperature Watch hot- and cold-hold zones for time and temperature breaches before they become a food-safety issue.	04 Spills & cleaning cadence Detect spills and missed cleaning rounds in the dining area and restrooms as they happen.
05 Labour vs demand Compare staffing to real demand by daypart, so you schedule to the rush, not the average.	06 Greeter & upsell prompts See whether greeting and upsell moments actually happen at the counter and drive-thru.

DRIVE-THRU

Every lane. Every car.
Every second.

- See wait time per lane, live
- Spot a stuck or skipped car instantly
- Balance the lanes when the rush hits
- Hit your daypart targets — and know when you won't

— THE ENGINE

Why it can do all this: GenAI.

The breakthrough is the **Vision-Language Model** — an AI that looks at a camera frame the way a person would. It reads the whole scene and its context, not just pixels or motion. That's what lets it judge quality, spot what's missing and explain why — across hundreds of situations, with no reprogramming for each one.

It understands context

Tells a real spill from a shadow, a browser from a buyer, a queue from a cluster.

It judges quality

A missing sauce, a pale fry, an untidy display — not just 'a person was here.'

It adapts on its own

New store, new menu, new season — it keeps up without re-training.

— Everyday vision runs continuously • the heavier GenAI kicks in only when it matters — efficient enough for one small Intel box

— WHY IT'S DIFFERENT

Old cameras count. GenAI understands.

OLD CAMERA ANALYTICS

- "Someone entered the store."
- "A person is at the counter."
- "Motion in aisle 4."

EDGEVISION

- "They browsed 4 minutes, loved the front table, and left without buying — and who was nearby."
- "This order is missing a sauce — fix it before it's bagged."
- "Spill in aisle 4 — clean-up sent."

— THE BUSINESS CASE

Where it shows up in your P&L.

More sales

Convert more of today's footfall — a small lift on traffic you already have moves the number.

Less shrink

Catch loss and process gaps as they happen — not at stock-take.

More throughput

Faster drive-thru and shorter queues mean more covers and baskets per hour.

More loyalty

Fewer wrong orders and cleaner stores lift repeat visits and reviews.

The math is simple. A one-point lift in conversion on 50,000 monthly visitors is thousands of extra baskets a month — from cameras you already own.

— PRIVATE BY DESIGN

Everything stays in your store.

No faces leave

No biometrics and no video are sent anywhere. Ever.

No cloud needed

Runs fully on-site — it keeps working even if the internet drops.

Intel-powered

A small, efficient Intel appliance per site — nothing else to buy.

intel partner

Pattern AI Labs is an **Intel Edge AI Partner** — EdgeVision is optimised on Intel hardware for real-time inference at the edge.

PROOF

Built by a team that's shipped this before.

Intel Edge AI Partner

Optimised on Intel and featured in Intel's partner ecosystem.

Production CV at scale

800+ product types already live in real grocery-vision deployments.

Retail + QSR focus

Purpose-built for stores and multi-unit quick-service brands.

TRUSTED BY Intel TATA Schneider Electric BigBasket

See it live in your store in **three weeks**.

Pick one location. We install on the cameras you already have. By week three you're watching real results on your own floor — with no risk to the rest of your estate.
