
EDGEVISION • STORE FLOORS & QUICK-SERVICE

EdgeVision

Retail & QSR

Every camera, a real-time operations engine.

Intelligent AI surveillance at the edge — turning every store and restaurant camera into a real-time operations & customer-intelligence engine. One on-prem edge platform across retail floors and quick-service restaurants.

• EDGE-FIRST • PRIVACY BY DESIGN • INTEL POWERED

CHAPTER 01

The Visibility Gap

Modern retail and QSR sites capture thousands of hours of CCTV every week.
Almost none of it becomes a decision.

— THE CHALLENGE · STORE FLOOR

The In-Store Visibility Gap.

Stores capture hours of CCTV every shift. But almost none of it becomes a decision.

- Staff effort & productivity is opaque — who is attending, grouping, on the phone
- Customer journey is invisible after entry — footfall $\neq$ engagement
- High-value customers walk in unannounced — loyalty runs blind to the first 60 seconds
- Floor-hygiene failures surface late — scattered footwear, disturbed displays, > 4 in back store

CHAPTER 02

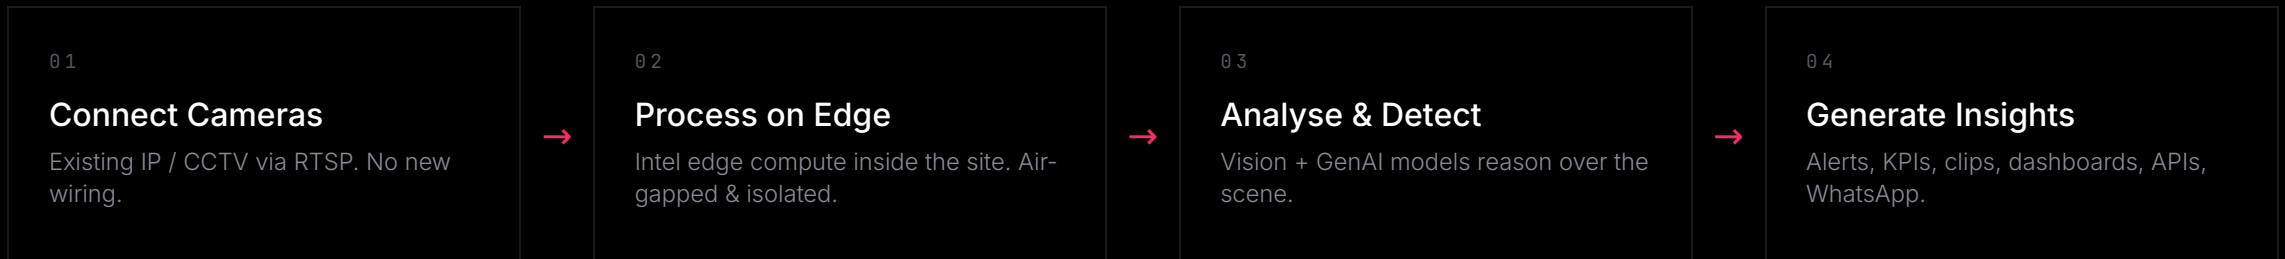

The Platform

A single edge appliance per site. Hybrid Vision + GenAI on-prem. Insights in seconds.

— THE SOLUTION

EdgeVision Platform.

High-performance Intel edge compute on the site LAN ingests existing CCTV, runs hybrid Vision + GenAI on-prem, and produces real-time alerts, dashboards and APIs.

CAM 06

CHAPTER 03

Two Lenses, One Network

The same feeds answer two questions at once: what is the customer experiencing, and how is the team performing?

— TWO LENSES

Customer & Staff Analytics.

CUSTOMER ANALYTICS

What customers do, where they linger, who they are.

- Heat-mapping by entry, fixture and category
- Walk-in flow between departments and categories
- Self-service vs assisted journey detection
- VIP / loyalty member recognition at entry
- POS ↔ camera time-stitch for billing intelligence

STAFF ANALYTICS

Who is attending, who is missing, who is grouping.

- ✓ Peak vs non-peak presence by zone
- ✓ Grouping > 1 min, mobile use, back-store time
- ✓ Style/size run timing — wall to back-store
- ✓ Per-staff customer attention & conversion proxy
- ✓ Brand-level heat-map for back-store activity

Same hardware. Same cameras. Two outcomes. Intel edge compute on the store LAN — no extra installation.

IN-STORE DETECTION

Tracking Customers & Staff Simultaneously.

Every person on the floor is detected, classified and tracked — without ever storing a face.

— CAPABILITY 01

Customer Analytics, Elaborated.

1

Heat Mapping

By entry, fixture, category. Walk-in flow between categories becomes a measurable cross-category insight.

2

Customer Tracking

VIP & loyalty recognition at entrance. Auto-enroll dwell > 15 min. No biometric data leaves the store.

3

Self-Service vs Assisted

Identifies customers who buy without staff help — critical for VM, range planning and staffing.

4

POS ↔ Camera Stitch

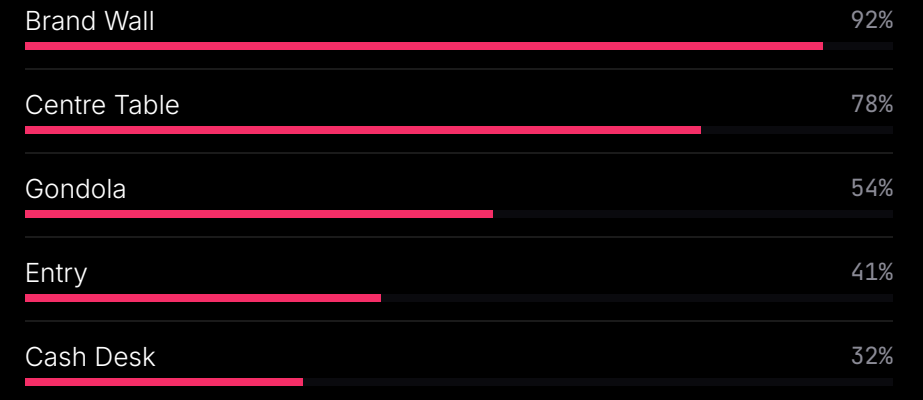

Correlate bills with in-store trail. Every transaction becomes a journey: dwell, attended-by, time-to-bill.

HEAT MAPPING

Customer Dwell, Visualised.

TOP DWELL ZONES

Generated entirely on the in-store edge box. No cloud round-trip.

VIP RECOGNITION FLOW

From CCTV Frame to Manager's Phone.

A loyalty member walks in. Within 3 seconds the manager has identity, history and a recommended action — without a single cloud round-trip.

01

0.4s

Recognition

Privacy-preserving embedding match against the store-local gallery. No raw faces leave the box.

02

2.1s

Notification

Manager pinged via WhatsApp / app — name, tier, last visit, last basket, preferences.

03

3.0s

Activation

Next-best-action: assign senior associate, push targeted POS offer, trigger follow-up sequence.

— CAPABILITY 02

Staff Analytics, Elaborated.

1

Grouping & Inattention

Flags clusters of staff grouped > 1 minute without an active customer. Manager receives a real-time alert with clip.

2

Wall-Location Coverage

Detects when a staffed wall is unattended beyond threshold during peak hours. Trended hourly, store by store.

3

Mobile-Use Tracking

Phone use detected with thresholds (1 min floor, 2 min back store). A coaching tool, not a surveillance tool.

— **CAPABILITY 02 · CONTINUED**

The Hidden Loops That Decide a Sale.

STYLE / SIZE RUN-TIME

- Time between staff leaving the brand location to look for a size and returning with stock
- Measured per-brand, per-staff, per-shift

PER-STAFF SALE CONVERSION

- ✓ Stitching the journey to attending staff and POS bill
- ✓ Yields an objective attended-conversion score

PER-STAFF ACTIVITY · S04 · SHIFT 10-8

— **BRAND-LEVEL STAFF HEAT MAP**

Where Your Staff Actually Spend Time.

FLOOR MOVEMENT MAP

- ✓ Per-staff movement trail across the floor
- ✓ Brand-zone occupancy heat by 30-min slot
- ✓ Hand-off detection between brand zones
- ✓ Comparison: peak vs non-peak coverage

BACK-STORE ACTIVITY

- ✓ Round-trips per brand per day (size hunts)
- ✓ Time spent by each staff in back store
- ✓ Alert if > 4 staff in back store at once
- ✓ End-of-day back-store occupancy report

— **MORE OUT-OF-THE-BOX · RETAIL**

The Long Tail of Use-Cases.

01 Floor & Display Hygiene Footwear out of place > 2 min triggers alert Restore-display task auto-assigned Daily hygiene compliance score per zone End-of-day VM delta photos	02 Queue & Cash-Desk Live queue length & wait time per till Auto-alert when queue > 4 customers Bagging / hand-off duration tracking Trial-room turnover & queue at fitting bay	03 Loss Prevention Tag-removal & concealment cues After-hours motion in restricted zones Unauthorised back-store entries Door-open / cash-drawer correlation	04 Operations & Compliance Opening & closing procedure audit Mannequin / dummy-presence at promo zones Camera health & obstruction monitoring Daily / weekly executive summary email
---	---	---	---

QSR EDITION

From Counter to Drive-Thru

Quick-service restaurants run on three numbers: speed, accuracy and food safety. Every camera in the dining room, kitchen and drive-thru already sees them. RetailTrack turns them into a live signal.

— QSR CAPABILITIES

Speed, Accuracy, Safety — Live.

Three operational levers every QSR brand tracks weekly via spreadsheets and mystery-shopper audits. EdgeVision tracks them per-shift, per-station, per-car — automatically.

1

Speed of Service

Drive-thru wait time per lane, counter queue length, mobile-pickup dwell, time-to-first-bag — every daypart benchmarked against itself, not a corporate average.

2

Kitchen Choke-Points

Idle stations, expo bottleneck, fry-station coverage, grill hand-off delays — flagged the moment they exceed threshold, not after the rush has cost a guest.

3

Food Safety & Hygiene

Gloves, hairnets, handwash frequency, holding-time at the heat lamp, spillage detection — scene-aware checks, low false-positive, ready for the next FSSAI / health audit.

— DRIVE-THRU OPERATIONS

Every Lane. Every Car. Every Second.

The drive-thru is the single biggest revenue line at most QSR sites — and the hardest to measure. EdgeVision instruments it end-to-end on the cameras you already have.

- Live per-lane queue length & wait time
- Order-board → handoff-window timing per car
- Pull-forward, blocked-lane & 'driver not served' alerts
- Lane-utilisation balance during peak hours
- Daypart vs forecast adherence

— **MORE OUT-OF-THE-BOX · QSR**

Every Camera, Every Service Window.

01 Counter & Kiosk Queue length vs labour deployed by daypart Self-order kiosk abandonment & completion Greeter / smile-at-window compliance Mobile-order pickup-bay dwell & handoff	02 Kitchen & Holding Station coverage per shift (grill · fry · expo) Hot-hold & cold-hold zone compliance Order assembly time & bagging accuracy Wipe-down cadence between rushes	03 Cleanliness & Safety Dining-area spillage & tray-bus cadence Restroom check cadence vs schedule Slip-and-fall hazard auto-flagging End-of-day closing-audit photo trail	04 Compliance & Audit PPE: gloves · hairnet · apron per station Handwash frequency vs corporate SOP Camera health & obstruction monitoring Daily / weekly executive summary email
--	---	--	---

CHAPTER 05

The Paradigm Shift

Why GenAI-powered analytics finally makes the in-store camera a primary business sensor.

THE PARADIGM SHIFT

Why GenAI Analytics Changes Everything.

DIMENSION	TRADITIONAL CV	EDGEVISION GENAI
Detection	Bounding boxes & pixel thresholds	Contextual scene understanding
Accuracy	High false-positive in varying light	Adaptive to lighting & occlusions
Self-Service	Cannot determine purchase intent	Full customer journey with billing
Hygiene	Static detection, frequent false alerts	Scene-aware: items vs. decor
Adaptability	Manual re-calibration per store	Self-adapting, zero retraining
Insights	Counts and timestamps only	Rich descriptions: why, not what

“Traditional analytics tells you someone entered the store. EdgeVision tells you they browsed for 4 minutes, showed interest in the brand wall, and left without purchasing — and which staff member was nearest.”

— **HYBRID INTELLIGENCE**

Real-Time Vision + On-Device GenAI.

1

Hybrid Intelligence

Vision AI runs continuously at 15+ FPS. GenAI (VLM) is triggered only when the rule engine demands context — about 90% compute reduction.

2

Zero Cloud Dependency

Everything happens on Intel edge compute inside the site. No frames, no biometrics, no PII transmitted off-premise. Full data sovereignty.

3

Configurable Rules

Node-RED-style rule engine. Tune thresholds (e.g. '> 4 staff in back store') without code changes or retraining.

15₊

FPS CONTINUOUS VISION AI PER CAMERA

~90%

COMPUTE REDUCTION VIA VLM TRIGGERING

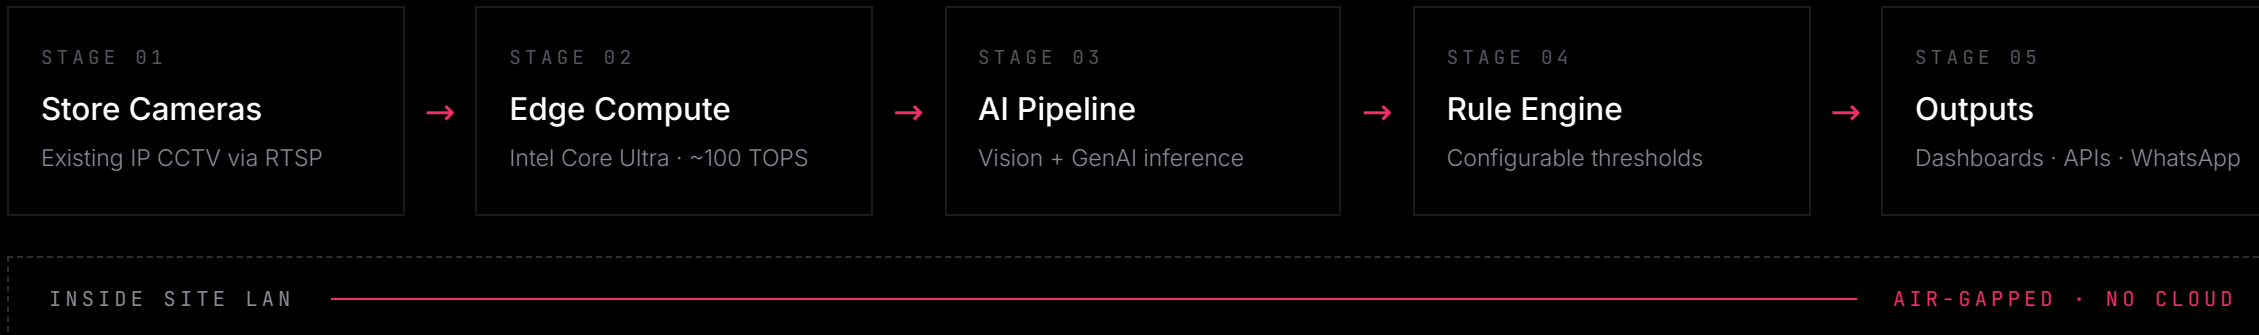

0

FRAMES, BIOMETRICS OR PII OFF-PREMISE

EDGE-FIRST ARCHITECTURE

Built for the Store LAN.

High-performance Intel edge compute on the site LAN. Reads existing CCTV via RTSP. Runs the full pipeline locally.

HARDWARE & PRIVACY

Intel-Powered. Privacy by Design.

HARDWARE · REFERENCE EDGE NODE

PLATFORM	Lenovo · ThinkEdge
PROCESSOR	Intel Core Ultra 9 285H · ~100 TOPS
MEMORY	32 GB
STORAGE	1 TB NVMe
OS	Ubuntu 24.04 LTS
NETWORK	Closed LAN, isolated

PRIVACY & SECURITY

- ✓ On-prem deployment — all processing inside the site
- ✓ Air-gapped — no external API calls required
- ✓ Role-based access (RBAC) for managers & HQ
- ✓ FIFO video retention with configurable policy
- ✓ Tamper-resistant edge appliance
- ✓ Zero biometric data leaves the device

ENGAGEMENT MODEL

From CCTV to Insights in Three Weeks.

WEEK 01

Audit & Install

Site survey, camera audit, RTSP setup. Intel edge compute installed on the site LAN. Baseline data collection starts.

WEEK 02

Calibrate & Tune

Zone definitions, threshold tuning per fixture, alert routing setup, custom rules wired to messaging stack.

WEEK 03

Handover & Train

Manager training, dashboard onboarding, alert rehearsal, first weekly executive insights report delivered.

What you get at end of week 3: a fully running EdgeVision installation, two weeks of baseline analytics, a configured alert pipeline, and an operations team that has run a full daily cycle on the new console.

ABOUT

The Team Behind EdgeVision.

Pattern AI Labs builds intelligent edge AI for enterprise operations — democratising real-time video intelligence with privacy and actionable insights in seconds.

01

Generative AI & CV

Multi-modal models for scene understanding, contextual reasoning and visual intelligence — tuned for enterprise edge.

02

Edge AI Optimisation

Inference optimised for Intel NPU + iGPU on Core Ultra series. OpenVINO toolchain. Performance & thermal-aware.

03

Real-Time Anomaly

Instant alerts for unusual activity, safety violations and compliance — backed by configurable rule logic.

04

Enterprise Integration

REST APIs, webhooks, WhatsApp, dashboard plugins. Integrates with POS, BI stack & loyalty platform.

INTEL EDGE AI PARTNER SPOTLIGHT Featured as a leading edge-AI innovator in Intel's exclusive partner ecosystem. Optimised on Intel hardware for real-time inference at the edge.

Let's bring intelligence to every store & line.

A focused 3-week pilot. Same cameras. New decisions. Measurable lift in customer experience, staff productivity and QSR speed-of-service.
